

Our Certifications:

We hold several hardware and software certifications with companies like Dell, Microsoft & Cisco. Our Systems Engineers have extensive experience designing systems from the ground up. The ability to make your office the most technologically advanced and effective that it can be is the peace of mind that we can offer.

This is **eMR Solutions llc**.

The **PRAXIS**® Solution:

As a physician, you practice an art form. You have developed your own philosophy and technique with years of training, experience and learning. Of course, you think and express yourself in your own way. No two physicians practice medicine exactly the same way.

However, as a practitioner, you also experience a bell-shaped frequency distribution of cases. Some cases are so rare you may never see them in a lifetime. Others you see five times a day. Still others you see five times a week or five times a month.

A Concept Processor is a neural network that automatically generates the documentation of new patient encounters by instantly retrieving text from the most similar previous encounter that you have seen in the past using the software. From this simple concept, a different EMR technology emerges that is not simply about documentation, but about automating your practice your way and allowing you to work smarter and faster. Unlike other systems based on templates, Praxis gets progressively faster and more powerful the more you use it, becoming a unique personal assistant. This is the Praxis Solution.

The Final Step in Electronic Medical Records

Phone: (239) 431-5614 Fax: (239) 431-5624

About Us:

Our company started with an idea between a Physician and a Computer Systems Engineer. A conversation ensued regarding the current systems available to all doctors today for EMR/EHR systems and how confusing or poorly designed they were. We sat down and asked a simple question, "How do we make

the process simple and concise?".

Our experts have taken the time to sort through all of this and find the solution for your needs. With our extensive experience in both the

medical and computer fields, we can help you close the gap & make an educated decision. That is the basis and driving force of our company. From the software and hardware designed to your needs to the systems security and support, we can provide a professional turnkey solution that will assure your practice an advantage over other technologically challenged ones.

How may we help you?

Our service motto is simple: "The Final Step in Electronic Medical Records" and we pride ourselves in our motto. eMR Solutions llc can offer your practice a complete EMR package from the ground up. From an initial assessment, we determine your requirements. We can provide you with several hardware and software solutions that will accommodate your budget and needs thus the best systems all within a reasonable cost.

We pride ourselves in our extensive experience in both the IT and Medical fields and understand what it takes to make a practice successful and profitable. This is why we would appreciate the opportunity to show you how we can help. Whether it is with your hardware needs, your current network or your EMR or Billing needs; allow us to show you how we can help.

Our Promise:

When you purchase a typical software EMR solution, you get a box and a phone number to call when you have an issue. We at eMR Solutions llc have done things differently. We start from the bottom designing your network infrastructure. Whether wired or wireless, we can take you to the next level in internal office automation, interaction and communication. This allows you, the Doctor, not to concern yourself with the hardware or software configuration process. We design, setup, configure and test your systems to make sure they will be fully functional, operational and supported. No more fussing with software manufacturers, installing your own software or going through the hassles of having to upgrade hardware to meet your software requirements. We can do all of this and more.
